

Exploratory Questions

1. For our project, we want to create a mock investment portfolio which we will then use with the real time data API's to create dashboards and recommendations
2. Which would perform better for a client's portfolio: traditional stocks or the newer cryptocurrencies? Crypto has gained a larger presence over the last few years and companies are beginning to pick up on this
3. Machine Learning: is stock data or cryptocurrency data predictable?
4. Correlation between census industry group data and their stock market performance?
5. What does that census industry group data have as far as indicators for this application?
